Aquaflow X300 Residential Pump - Service Manual (extract)

Document ID: AQF-SM-X300, revision A. The X300 is a residential heating and hot-water circulation pump.

1. Specifications

The X300 residential pump has a rated pressure of 6 bar, a maximum flow rate of 3.5 m3/h, a 0.4 kW 230 V single-phase motor and a maximum fluid temperature of 95 C. It weighs 7 kg.

7. Failure versus normal wear

Motor seizure and housing cracks are classed as failures. Seal wear is normal wear. Limescale build-up from untreated hard water is not a failure.

8. Maintenance

Bleed air from the pump at installation and after draining the system. Have the pump inspected once a year together with the boiler service.

9. Warranty

X300 units registered under the X300 Extended Care programme carry a thirty-six (36) month warranty from the date of purchase. Extended Care is available for the X300 model only.

Extended Care requires online registration within thirty (30) days of purchase and an annual service by a qualified engineer. It does not apply to units used commercially.
